

TENOVA Company Profile – short version

Tenova, a Techint Group company, is your worldwide partner for innovative, reliable and sustainable solutions in the metals and mining industries.

Leveraging a staff of more than three thousand forward-thinking employees across five continents, Tenova shares the long-standing principles of its industrial group and better understands its partners' needs. The company works alongside client-partners to design and develop innovative technologies and services that improve their business both today and into the future, creating solutions that help mining and metals companies reduce costs, save energy, limit environmental impact and improve working conditions for their employees. Together, the people of Tenova share a strong sense of passion for their work. By channeling this passion through professional expertise, they're able to anticipate trends and transformations within the industry, helping clients identify and take advantage of new opportunities the moment they're available.

Tenova has earned its position as one of the industry's most trusted leaders by relying on a distinctive, four-pronged business approach characterized by: **Innovation**, developing solutions that consume less energy, produce less raw material waste, reduce costs and pollution, and increase overall facility efficiency; **Reliability**, providing innovative technologies for metals and mining that work well, and well into the future; **Sustainability**, carefully analyzing industrial processes in order to identify solutions that reduce energy consumption, improve facility efficiency, cut costs and limit environmental impact; and **Safety**, guaranteeing that every solution the company designs and implements makes the host workplace safer.

In **mining**, Tenova provides integrated solutions to the global mining, bulk material handling, minerals processing and beneficiation industries, including the supply of dedicated services and components. The company's offering is characterized by innovative technological solutions and process and commodity knowledge along industry value chains. In **metals**, Tenova works both upstream and downstream, continuously innovating for clients by focusing on quality, energy savings and pollution reduction in areas including metal making, hot and cold rolling, processing and aluminum, and dedicated services and components.

Tenova headquarters are located in Castellanza (Italy), while Leipzig (Germany) is company's primary technology hub for mining solutions. Today the company can boast a global presence across 21 countries thanks to a network of companies and services designed to support clients when, where and how they require.
